

9 Reasons

why SAP Business ByDesign **IS DESIGNED FOR LIFE SCIENCE COMPANIES**

SAP Business ByDesign is a great fit for a Life Sciences company for a number of reasons. One of the most important of these reasons is that ByDesign is fundamentally well structured to support a validated environment.

Built around 35 end-to-end best-practice business processes

1

These processes are already well documented. The embedded workflows in ByDesign ensure your personnel follow a structured workflow for all processes that can be easily traced and audited at any point in time.

Business ByDesign is extremely well documented which helps facilitate the validation documentation gathering requirements.

Embedded change and transaction logging

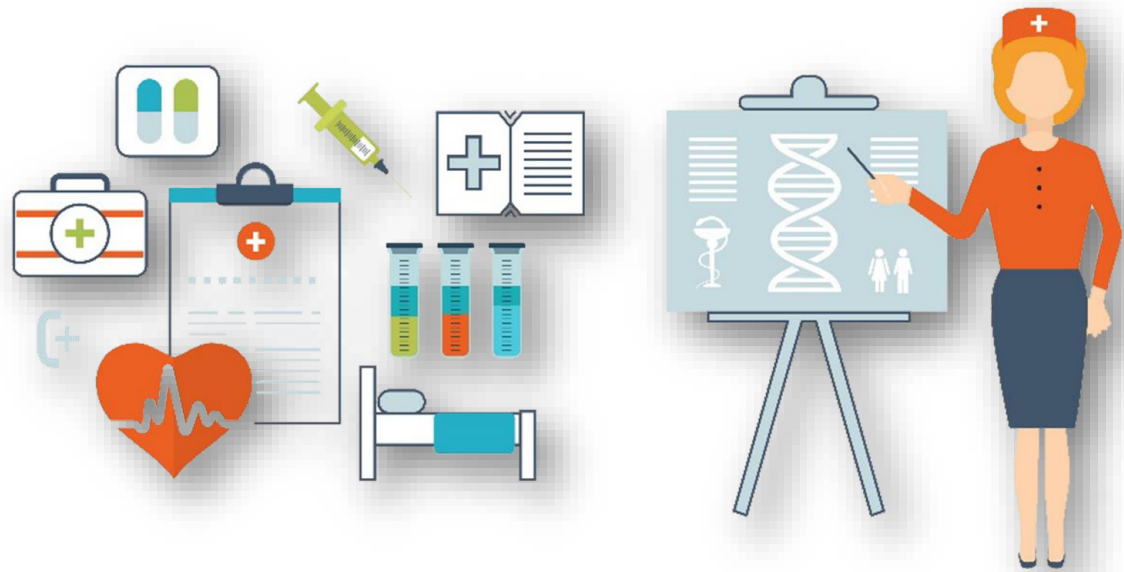

2

Business ByDesign has been built from the beginning to support audits regardless of their nature - financial, compliance or process. You will always know exactly who did what and when in the system.

Flexible intuitive help

The help system is customizable, allowing Navigator to add the screen by screen operational instructions for your process straight into solution. This is key for a validated environment because it makes the correct process available to everyone at any time. It also facilitates efficient ramp-up of new employees.

Quality Control is built into the solution's core

4

Business ByDesign supports the following inspection types out of the box: Receipt from Supplier, Ad Hoc, Receipt From Production, Shipment to Customer, Return from Customer. Navigator can also enable the solution to auto-quarantine items.

True batch, lot and serial number traceability

Business ByDesign supports batch, lot and serial numbers. Serial number in Serial number and Batch in Batch tracking will be officially released as of the 1802 build.

Navigator Business Solutions is an active partner working with SAP's development program. Embedded Warranty tracking allows the solution to auto associate warranties with serial numbers as they are shipped.

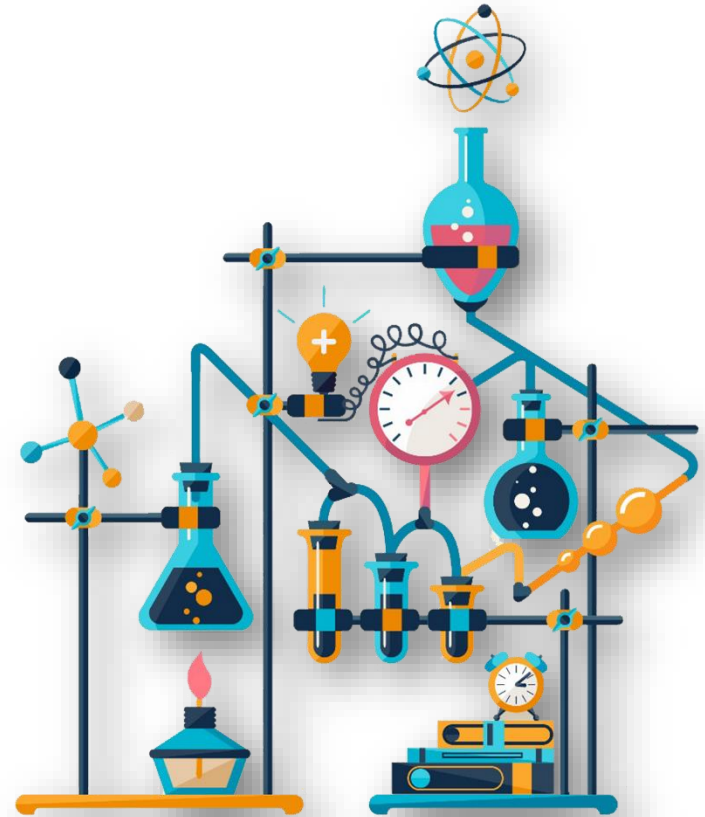

Business ByDesign has very strong Bill of Materials (BoM) Revision control and revision tracking capabilities, allowing change tracking to BoM and BoM Routings with effective dates. This means you have visibility into all past revisions of every BoM including what revision was in place for any given Production Order. ByD also supports BoM variants and tracks changes to Variants as well. The system tracks the user ID/date time for all changes.

CAPA - Corrective Action- Preventative Action with Quarantine

7

Navigator Business Solutions has enhanced SAP Business ByDesign to support robust CAPA tracking and reporting. The Navigator delivered solution supports Case creation, Initial Risk Assessment, Occurrence rating, Detection Rating, and RPN (Risk Priority Number), Containment and Recall.

You can define single or multiple root Causes and Create and Track you Action Plan(s). For recall support the system can be configured to identify all current stock, deliveries and production of affected raw material or finished goods. You can identify and quarantine all affected stock from a single screen.

Supplier Products Approvals

8

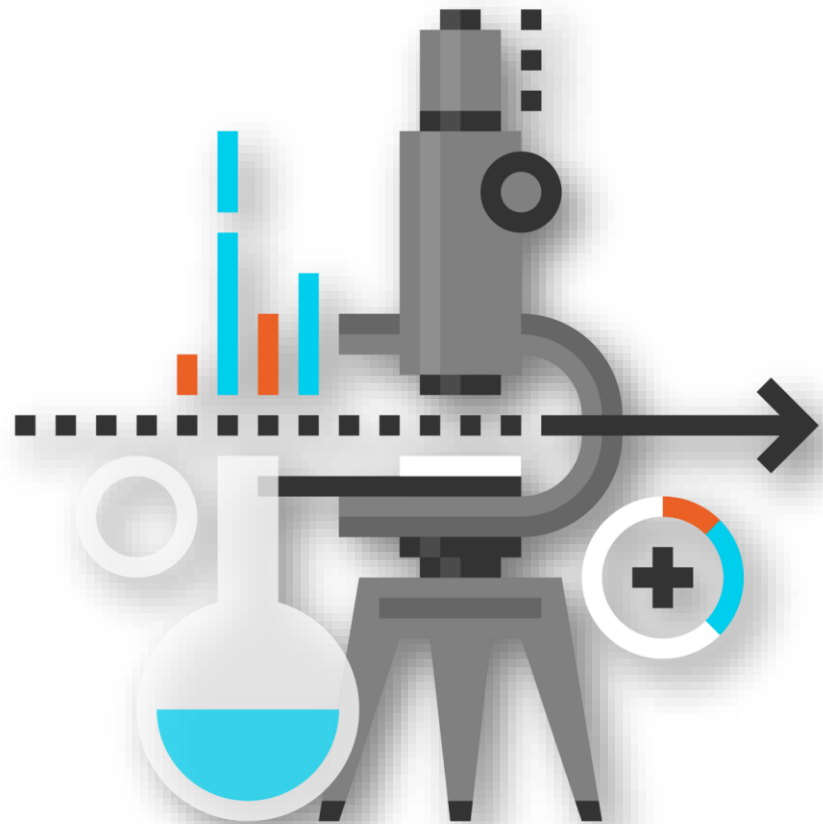

Using product and supplier approvals we can ensure that materials are only sourced from approved suppliers. The system can be configured to mark products as restricted and thus requiring sourcing from an approved supplier list. Along with supplier approvals the system tracks whom approved the supplier and the date/time of the approval.

Customer product approval

Using customer product approvals the solution can be configured to flag any product as being restricted to customer, or customer location. This ensures that only approved items are shipped to the customer or to an approved location.

Approvals are user ID and date/time stamped. Certifications and documentation can be attached to the approvals as needed.

Navigator's Life Sciences industry solution, is a predefined SAP Business ByDesign offering based on Industry experience and developed best practices, packaged for the industry, with more than 10 years of ERP implementations, supporting mobility, real-time analytics, quality and the compliance needs of our customers.
